DETAILED ACTION

Final Rejection Withdrawn

1. Upon further consideration and a review of the amended claimed subject matter, filed on March 11, 2004, the finality of the last Office Action, mailed on August 7, 2003, is being withdrawn in view of the prior art reference of Shibano (4,425,176).

Prosecution is reopened and a complete Office Action on the merit follows:

2. Claims 14, 18 and 21-26 rejected under 35 USC 102(b) as being anticipated by Duncan in view of applicant's amendment filed on March 11, 2004.

3. Claims 14-26 rejected under 35 USC 103(a) as being unpatentable over Pedginski in view of Duncan in view of the amendment.

Response to Arguments

4. Applicant's arguments with respect to claims 14-26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1772

6. Claims 14, 18, 20-21, 24 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Shibano (4,425,176).

Shibano relates to a process for the production of a multi-layer composite (figure-10) with a plastic layer (A) that has release properties with respect to adhesives (B) comprising locating materials producing release properties within the plastic layer, wherein a first web (II) is provided in production of the composite material on one side of which a layer of adhesive is located, and said adhesive layer is always co-extruded together with the plastic layer with the release properties, which in turn is bonded to a second web (II). The first and the second web can be of paper, fabric, metal foil, etc. (col. 8, lines 25-48 and col. 22, lines 19-21). The layers are extruded onto the first web simultaneously by co-extrusion as mentioned in column 8, lines 25-48. further, as shown in figure-10, the two layers of adhesive and release properties are extruded between the two webs (II and II). Also, figure-10 shows the presence of further layers A, B, etc. on the outside of the second web and/or layer F on the outside of the first web.
